

Abstract

It is an object of the present invention to provide an audio signal processing apparatus for generating an audio signal capable
5 of alleviating a user's sense of incongruity.

The audio signal processing apparatus comprises an audio processing unit 2 and a control unit 3. The audio processing unit 2 is provided for processing an audio signal Sau outputted from a receiving unit Rx which receives a signal transmitted through
10 a digital transmission route. The control unit 3 is provided for judging a reception state in accordance with a plurality of internal states Ddet of the receiving unit Rx, controlling signal processing contents to be executed by the audio processing unit 2 in accordance with a result of the judging. In this way, it is possible to generate
15 from an audio signal Sau an audio signal Scmp capable of alleviating a user's sense of incongruity even if a reception state has become worse.
